WARNING!   WARNING!

Do not use these disks until you have read page 4 of the CP/M Kit manual.
These disks cannot be used to boot the CP/M operating system, and until
that is done they will not function properly. Placing them in the disk
drive prior to booting the CP/M operating system with the Commodore CP/M
System Disk shipped with your C128 will accomplish nothing...and only
result in the appearance of an error message on your monitor.

If you have lost or misplaced the Commodore System Disk you will not be
able to load any of the files on these disks. If this is the case, you
may request a replacement disk from Commodore, your local dealer, or you
may contact INCA, either by mail or on the telephone HELPline to obtain
information on other sources of the Commodore CP/M operating system.

In accordance with our policy of making constant improvements to INCA
products, this edition of the CP/M Kit has additional documentation for
the MEX128 program on the disk labeled side 4 which is not mentioned in
the manual. The filename is MEX11DOC.WS. Depending on your printer and
interface you may find that it is easier to print this file than the
MEX128 help file found on the disk labeled 2. Use the utility file
NEWSWEEP for reading or printing it.

After you have become familiar with CP/M you will probably want to obtain
more public domain programs. INCA has collected thousands of CP/M files
from various sources, evaluated them, and selected the best of them for
inclusion in our CP/M library. You will find a catalog of this library
on the disk labeled side 4, with disk descriptions and a convenient order
form. To read or print them, you may use NEWSWEEP. Directions for doing
this appear on the other side of this sheet. Updates to this catalog, as
well as information on the availability of commercial CP/M progams, will
be sent to everyone who mails us the limited warranty registration card.
We urge you to do this promptly. If you really don't care to answer the
questions about your age, etc. ignore them, but return the card please.
Sixty percent of the first thousand purchasers of the CP/M Kit are
unaware that the latest versions of certain programs are available at a
reduced cost because they never returned the registration cards to us,
and we have no way to notify them. Give us the opportunity to keep you
informed!

We have improved our customer service also. We obviously could not cram
everything you should know about CP/M in a small booklet. Unless you are
very unusual there will be times when you wish you had a friend to help
you over the rough spots. You do! INCA provides free consultation to
all registered owners of the CP/M kit. After returning the registration
card to us the CP/M HELPline will be available 12 hours a day, Monday
through Saturday, for advice, assistance, and consultation. If you
prefer, you may write us for help instead. Be sure to describe your
entire equipment configuration and provide as many details as possible.

        Call: (619) 484-2173   9 a.m. - 9 p.m. Pacific Time

        Or write: INCA CP/M Customer Services
                   9732 Paseo Montril, San Diego, CA 92129

USING NEWSWEEP

If not in the CP/M mode, boot CP/M with the Commodore 128 CP/M
System Disk, remove the disk, then place the disk with NEWSWEEP on
it in your drive. Type NEWSWEEP, press return , wait for the screen
to stabilize, and remove the disk. NEWSWEEP will remain in memory.
You may then place any disk which has documentation files in the
drive. Type L (to log in the new disk so NEWSWEEP will read it), and
when a prompt appears on the screen requesting which drive to use,
drive/user/mask?, type A if you have one drive, or B, C, or D if you
have multiple drives. The directory of the disk in the drive you
specified will then appear on the monitor file by file as the space
bar is depressed. When the text file you wish to read or print
appears opposite the cursor, type V (for view) or P (for print).
You cannot do this to any file with a filename extension of COM, of
course, but you can select squeezed files.

NEWSWEEP is a very useful utility which will not only read squeezed
files, but copy files from one drive to another. To do this,
identify the files you wish to transfer to another disk by typing T
(tag) beside the filenames. Having selected them, type M (move),
then the letter of the destination drive in response to the screen
prompt 'copy to drive/user?'.   For example, B:[v], where the
optional v allows verification. Hit return and watch the action. A
menu of all the commands will appear on the monitor whenever you
type a question mark. You may exit NEWSWEEP by typing X. If you
wish to abort the viewing of a very long document use control C
(pressing the control and C keys simultaneously).

Newsweep is also very handy for working with user areas. To place
files in user area 3, for example, type B3:[v] after typing M and
the files you tagged (with T) will go there. Beware, as NEWSWEEP
will remain in user area 3 until you log a disk as A0: or B0: etc.
The directory of a disk which has files in various user areas can be
examined easily by logging it in with A* or B* etc. NEWSWEEP will
then display the files in all 16 user areas. I think this ability
to partition your disk into 16 user areas so easily is one of the
most attractive features of CP/M Plus. I use it extensively.

There is much more to NEWSWEEP. Now that you see how useful it can
be, why don't you try to struggle through the documentation file and
learn more about it. If this attempt to get you started is not
adequate, please let me know by CP/M HELPline or by mail. I need
the feedback in order to improve this explanation, and you will be
doing dozens or hundreds of other Commodore hobbyists a favor too.

Have Fun.....J. Nelson Williams, INCA
