NEWS RELEASE

We have just completed our revisions to our FAMILY TREE computer program for the Commodore 64 computer and would like to inform you of its features so people in your area are aware of the availability of this new genealogical tool.

The program comes in two versions--a regular version and a special LDS version.

Both version operate on the principle of writing an individual file for each ancestor and then being able to retrieve information and link the files together to produce the family record forms, pedigree charts, indexes, sorts, etc.

We are enclosing two brochures related to the program--one for each version. You will note that the LDS version will produce three additional types of printouts--A Detailed Family Group Sheet complete with Temple Data, a Marriage Entry Form and a Individual Entry Form. These forms have been prepared to the requirements of the Church Genealogy Department

The program is selling at a retail price of \$49.95 and we would be greatful if you could refer any persons wishing a program of this nature to us.

As experience LDS genealogists, we have produced, we feel, a computer program that can suit the needs of the LDS and non-LDS as well, but still be at a reasonable price.

We will be please to hear from anyone in your area that is interested in the program.

Yours truly,

Gordon Hillman

	(\$32.50 US - \$39.95 CDN)	
	Postage & Handling	\$ 2.00
	Sales Tax	\$-----
	(Ontario & Michigan)	
	Total	\$-----

If you wish a special LDS version for members of the Mormon Church check here-----

* File Disk required for FAMILY TREE.
(FAMILY TREE can prepare these)

** Excellent program for backup of data files.

FAMILY ROOTS for your GENEALOGY

With your MS DOS or CP/M system you can have the most up-to-date information instantly available. Whether you are a hobbyist or a serious researcher, FAMILY ROOTS provides the functions you need. There are SIX main programs and SEVEN utilities in FAMILY ROOTS.

EDIT stores basic family information for each member, including facts on birth, death, parents, children, spouses, sources, and others of your choice. Information may easily be changed at any time. The program saves you considerable work by storing information common to several people when you enter it once.

CHARTS print three types of pedigree charts and a chart of descendants for any person. Controls allow you to select what information to include.

SHEETS prints one person summaries and the popular family group sheets. Controls allow you to select formats and other features.

LISTS make alphabetized and numerically ordered indices of your family for as few or as many members as you choose. The capability to select names that sound alike is provided as one of the many possibilities.

SEARCH looks through the basic family information stored with EDIT, finding whatever you request. Very general search criteria on several levels enable you to pinpoint family patterns and to test hypotheses.

TEXT is a "card file" system for storing notes and other information that don't fit the basic categories. Each diskette used by TEXT is independent of every other, giving you unlimited storage capability.

The **CONFIGUR** utility allows you to customize FAMILY ROOTS to your own style and preferences. Other utilities print blank charts, generate address lists, analyze diskettes, prepare diskettes, reassign ID's, and set the function key values.

The above synopsis can't do justice to this comprehensive system. Outstanding features are the lack of any limits on the number of people supported and on the length and format of information saved. The programs are extremely simple to use even if you are inexperienced with a computer.

FAMILY ROOTS needs an MS DOS or CP/M system with 64K of useable memory, the MBASIC interpreter, and 1 disk drive. It is capable of using many disk drives and a wide variety of printers. (Please contact us for a current list of machines on which FAMILY ROOTS has been hosted.)

Suggested retail PRICE including manual. Manual available separately.
