

Collette Utilities

Copyrights

The program 'Select Printer' has been released to Public Domain, and is included here for completeness. All remaining programs and documentation provided in this package are copyrighted, and are therefore protected under United States and international copyright laws. It is illegal to distribute copies of these programs and documentation without proper written consent by the copyright holder. You are entitled to make backup copies for archival purposes only, and may only modify these programs for your own use.

General

Thank you for purchasing Collette Utilities. We hope that you'll find many of the programs and desk accessories included in this package useful and that they will further enhance your enjoyment and productivity with GEOS.

The programs in this package were written by Jim Collette, long known in the GEOS community as a knowledgeable programmer and enthusiastic user. Many of the programs have been sold separately by Jim, but we now offer them all together in a single, cost-effective collection.

All programs operate in both 40 and 80 columns, and work with GEOS 64 and GEOS 128. We do recommend that they be used with v2.0 of GEOS, though most should work with older versions. Programs such as geoWizard, and the associated geoWizDump require a free bank of RAM expansion memory. This means that you must have a 1750 REU, GEORAM, RAMLink, or RAMDrive to use them. REU and GEORAM users may have to turn off any shadow options, and RAMLink/RAMDrive users may have to increase the size of their DACC partition for these programs to work.

Documentation Files

Side one of the disk contains nine (9) files with the extension '.doc'. These are documentation files which describe the features and functions of the programs included on the disk. The files may be viewed or printed using geoWrite v2.1, the word processing program supplied with GEOS v2.0. If you do not have this version, and have no other means of getting these files printed, contact CMD Technical Support for assistance.

Disk Contents

The following is a listing of the programs supplied on the disk, with a brief description about them. Other files located on the disk but not described here are documents describing the features and functions of the programs, or sample documents which exhibit usage of the PS Processor.

FONT EDITOR 2.5	Application used to edit and create standard GEOS fonts, GEOS Mega fonts, and Perfect Print LQ, HQ and border fonts.
FONT CHANGER	Allows you to globally change a given font and point size within a geoWrite document to some other font and/or point size.
GGEOWIZARD	Lets you temporarily use a second program without quitting from the program currently being used. Also has a built-in screen dump utility, allowing you to print out the screen from most any point within a program.
geoWizDump	Used in conjunction with GGEOWIZARD, this additional utility enhanced the screen dump capabilities, allowing you to save the screen to files as well.
MiniDisk	A file copy and delete utility which allows you to copy files between two different drives on your system. Since this is a desk accessory, you may copy or delete files without exiting from an application to the deskTop.
Select Printer	A desk accessory that allows you to change the currently selected printer driver from within an application.
DOS_Wedge	Desk accessory which lets you send standard Commodore DOS commands to any drive attached to your system.
AutoAlbumAdd	This is a desk accessory which will automatically place the current photo scrap directly into the first photo album located on the disk, without having to manually open and use the Photo Manager.
PS Processor	Used in conjunction with geoPubLaser to create modified postscript files or output. Uses geoWrite script files which instruct the program how the output is to be formatted.
PS.Patch (disk)	Used to patch geoPubLaser for output to disk.
PS.Patch (GC)	Used to patch geoPubLaser for output to printer via a parallel cable (geoCable).
LaserWrtr 2.1GC	Parallel cable (geoCable) version of LaserWriter printer driver.

Limited Warranty

Creative Micro Designs, Inc., warrants the disk on which the programs are supplied to be free of manufacturing defects for a period of 90 days from date of purchase. If the disk should become unreadable due to manufacturing defects during that period of time, contact Creative Micro Designs, Inc. for authorization to return the disk for exchange.

Creative Micro Designs, Inc., does not guarantee that the programs or data on the disk are fit for any particular purpose, nor do we accept responsibility for any loss of data, time, resources, or other damages, either consequential or inconsequential, alleged or attributed to the use or misuse of this product. Some states and countries do not allow such limitations, and you should check with proper agencies for more information.
