SpellPack™

SPELLING CHECKER

The program that teaches your 64™ to spell
Never produce a document with a spelling
error again!

This is SpellPack, a powerful computer program that checks an entire document in 2 to 4 minutes. SpellPack contains a dictionary of over 20,000 of the most commonly used words in the English language. It even allows you to expand the dictionary by over 5,000 specialized terms. SpellPack compares each word in your document with its internal dictionary at lightning speed. It then highlights those not found. It does this **in context, right on the screen**. Two things occur at this point. If the highlighted word is misspelled it can be edited in any manner you wish and instantly added to the dictionary. Even if the word is correct, but not listed, you can add it. You can quickly add most of the technical vocabulary you use in your field, whether it is legal, scientific, medical, educational, musical, linguistic, or other.

You'll really begin to appreciate the beauty of SpellPack on your longer documents. For example, SpellPack accelerates the per page rate of checking with each additional page. What this means is that if a one page document takes two minutes to check over, a five pager might only require three minutes.

SpellPack is fast, simple to use and versatile. Additions and corrections are made with a single-key command. SpellPack can be used with the documents created by major word processing programs written for the Commodore computer.
