=====

First and foremost, thank you for your order. The FGM Connection has a continuing commitment towards furnishing more products and support to enhance your computing enjoyment.

FUN GRAPHICS MACHINE takes off where Print Shop and PrintMaster left off. You have 100% total control over layout and appearance of your work. The only limitation on what can be created with FGM is your imagination and your printer. Create anything! Labels, Forms, Calendars, Posters, etc. All of FGM ads and Forms are created using FGM. Even the ads in RUN magazine are created with FGM. FGM on your C=64 has no trouble standing up against IBM, Macintosh, and Amiga computer systems. This is not an idle claim.

Don't be intimidated by FGM's various modes and keystrokes. Learn a little at a time and have fun. Never fear pressing any of the key combinations; you can not hurt your machine or the program, even if your cat or ferret runs across the keyboard.

Please refer to the March/April 92 Review Special feature article in RUN magazine for more details on the FUN GRAPHICS MACHINE.

FGM CLIP ART Vol.1 is an assortment of over 200 excellent graphics that FGM loads up through the ~~Clip Art section of the program.~~ These graphics are better than any Print Shop or Printmaster graphics ever made.

FGM FONT DISK is a collection of over 75 fonts that load straight into the Fun Graphics Machine.

FGM C64 KEYBOARD TEMPLATE: (Side 1) supports EPSON compatible printers (80dpi) or (240dpi 3x). (Side 2) Supports Commodore 7 pin printers. These are BLANK OVERLAYS for you to fill in and print out. DEMO included.

FGM C128 KEYBOARD TEMPLATE: Same as above except for the C128 keyboard.

FGM CALENDAR TEMPLATE: (Side 1) for EPSON compatible printers (120dpi). Room for 3 blk Print Shop graphics or Printmaster graphics + room for text on each day of the month. (Side 2) for Commodore printers (60dpi). Must use 2 blk Print Shop graphics with Commodore 7 pin printers.

FULL KEYBOARD OVERLAYS are overlays that were created with FGM and printed on 110# index stock. These overlays contain the commands for operating various programs.

* NOTE * On the C=128 & the SX-64 overlays added support is needed to hold the top up. SUGGESTION: do not cut the excess off the top, instead bend it over to create a leg for support. C=64 OVERLAYS do not need any extra support.
