KEYBOARD ARROW CONTROL

↑ CRSR ↓	Moves arrow down
SHIFT ↑ CRSR ↓	Moves arrow up
← CRSR →	Moves arrow right
← SHIFT CRSR →	Moves arrow left
RETURN	Makes selection where the arrow is pointing (has the same effect as pressing the joystick button)

QUICK START

1. Use the joystick (or **CRSR** keys) to move the arrow on the screen; press the joystick button (or the **RETURN** key) to make selections or pick up musical symbols.

2. Pick a title for your composition, selecting **Enter Title** from the **Title** menu (which reads **THE MUSIC SHOP** when you first load the program). Type in your composition name.

3. Use the **Setup Screen** window to select the staff mode, screen colors, and key signature you want for your composition. After exiting this window, type **K** to enter the selected key signature at the beginning of the staff.

4. Create your original composition using notes and musical symbols from the **Get Notes** window in the **Tools** menu. Place notes and symbols on the screen by picking them up in the **Get Notes** window, entering them from the keyboard (type **1 ... 6** to get whole through thirty-second notes; **SHIFT 1 ... 6** for rests), or pointing at a note already on the screen and pressing the joystick button to pick it up.

5. The **Music Box** in the upper-left corner tells you where your arrow is pointing, by staff number and note name.

6. Erase notes and symbols by pointing directly at them and pressing the joystick button twice (or type **E**).

7. Turn the page by pointing at the **Page Box** in the upper-right corner. While pressing the joystick button, push the joystick up or down (use **F3** and **F5** for keyboard control).

8. Listen to your composition by pointing the arrow at the **Music Box** to make the  appear, and press the joystick button to start (and stop) the music (or press the **F7** key).

9. Use the **Adjust Sound** window from the **Tools** menu to find the sound you want for your composition; turn on the music by pointing at the . The music synthesizer can be controlled by loading an instrument, selecting among the presets, or manually adjusting the switches and slides (use **F3** and **F5** for keyboard slide control). Typing **R** restores the original system presets.

10. Use the features in the **Edit** menu to perfect your composition. **Capture** the area you want first. You can **Cut**, **Cut** and then **Paste** (return to the **Edit** menu to choose **Paste**), **Copy** and then **Paste**, or **Clear**.

11. Select the **Undo** feature in the **Edit** menu to reverse or undo the last editing step you took.

12. Check that each measure of your composition has the right number of beats by selecting **Verify Timing** from the **Tools** menu.

13. Save your composition by selecting the **Save Score** feature from the **Title** menu. Select **Format Disk** first if you don't have a formatted data disk ready.

14. Use the other features in the **Title** menu to print part or all of your composition, to clear the screen, to list titles of music on the program disk, or to load a score from the disk onto the screen.
